EDUCATION

UNIVERSITY OF CALIFORNIA IRVINE

Bachelor of Science in Computer Science, Dean's List (4x)

Irvine, CA

Expected March 2026

EXPERIENCE

American Express – Software Engineer Intern

June 2025 – Present

- Optimized Elasticsearch query performance by developing custom tokenizer and parsing methods, reducing query latency by 40% and improving search result accuracy across internal applications by 25%.
- Designed and implemented the ACE workflow to automate patch triggering and Elasticsearch indexing tasks, streamlining deployment processes and reducing manual intervention by 60%.
- Led the transition of a backend service from E0 (local development) to E1 and E2 (QA and Integration) environments by setting up CI/CD pipelines, resolving environment-specific bugs, and collaborating with cross-functional teams to ensure deployment readiness.

EVEMETA – Software Engineer Intern

July 2024 – November 2024

- Designed and deployed Go-based microservices to manage user login and signup information, enhancing system reliability by 10% and reducing payment transaction errors by 10% in a mid-scale IT environment while ensuring secure and efficient payment processing across business systems.
- Contributed to the development of a highly reliable video player using Flutter, implementing key features like play/pause, refresh, and advanced noise/haze reduction, which improved user satisfaction by 20%, reduced buffering time by 25%, and enabled smooth, low-latency streaming at 60 FPS
- Developed a system to aggregate news articles from multiple sources using MongoDB, reducing memory usage by 20%, accelerating content delivery speed by 35%, and boosting data availability and consistency.

Commit The Change – Software Developer Intern

January 2024 – June 2024

- Designed and implemented scalable API endpoints using Flask(Python) and Java, optimizing backend performance by 20% through efficient database interaction and streamlined logic, ensuring reliable data exchange.
- Integrated RESTful APIs with frontend applications using React.js, ensuring seamless communication and supporting 300+ daily users, increasing data retrieval efficiency by 15%.
- Led and coordinated code reviews with 5 team members using GitHub, identifying and resolving over 30+ code issues, improving code quality and maintainability by 25%.

PROJECTS

Fablix Movie Page | Java, Tomcat, AWS, GCP, Docker, Kubernetes

- Developed a responsive full-stack movie web app with advanced search, filtering, and autocomplete features; optimized backend using edit distance queries, RESTful APIs, and Redis caching, reducing response time by 40% and search errors by 18%.
- Deployed and orchestrated the system using AWS EC2, ELB (Elastic Load Balancing), Kubernetes, and Docker containers expanding scalability by 3x and reducing server response time by 30%.

ACTIVITIES

LikeLion | Co-founder of LikeLion UCI

- Co-founded UCI's first coding platform and led 10+ hands-on workshops, delivering peer-based technical education to 100+ students with 80% collaborative participation and real-world software training.
- Mentored 50+ students through LikeLion's global network, connecting peers across the U.S. West Coast and South Korea, and facilitating tech projects and hackathons resulting in 20% of participants securing internships.

TECHNICAL SKILLS

Programming Languages: Python, Go, Java, C/C++, HTML/CSS, JavaScript, Bash

Frameworks & Libraries: Flask, FastAPI, React, Node.js

Tools: Git, Unix, MySQL, MongoDB, Docker, Kubernetes, AWS, GCP, Tomcat, Maven

Certifications: AWS Certified Cloud Practitioner (CLF-C02), AWS Certified Solutions Architect(SAA-C02)

Concepts: Software Engineering, Data Structures & Algorithms, System Design, Database Systems, Cloud Infrastructure, Machine Learning, REST API, Unit Testing, Test-Driven Development
