EDUCATION

UNIVERSITY OF CALIFORNIA IRVINE

Irvine, CA

Bachelor of Science in Computer Science, Dean's List (4x)

Expected: December 2025

Courses: Data Structures & Algorithms, Project in Databases and Web Applications, Operating Systems

WORK EXPERIENCE

EVERMETA – Software Engineer Intern

July 2024 – November 2024

- Designed and deployed **Go-based microservices** to manage user login and signup information, enhancing system reliability by 10% and **reducing payment transaction errors by 10%** in a mid-scale IT environment while ensuring secure and efficient payment processing across business systems.
- Contributed to the development of a highly reliable video player using **Flask**, implementing key features like play/pause, refresh, and **advanced noise/haze reduction**, which improved user satisfaction by 20%, **reduced buffering time by 25%**, and enabled smooth, low-latency streaming at 60 FPS
- Developed a system to aggregate news articles from multiple sources using **MongoDB**, **reducing memory usage by 20%**, **accelerating content delivery speed by 35%**, and boosting data availability and consistency.
- Conducted code reviews for **5+ developers weekly**, ensuring adherence to best practices and improving overall code quality, resulting in a **15% reduction in bugs**.

Commit The Change – Software Developer Intern

January 2024 – June 2024

- Designed and implemented **scalable API endpoints** using **Flask(Python)** and **Java**, optimizing backend performance by **20%** through efficient database interaction and streamlined logic, ensuring reliable data exchange.
- Integrated **RESTful APIs** with frontend applications using **React.js**, ensuring seamless communication and supporting **300+ daily users**, increasing data retrieval efficiency by **15%**.
- Led and coordinated **code reviews** with 5 team members using **GitHub**, identifying and resolving over **30+ code issues**, improving code quality and maintainability by **25%**.

PROJECTS

Fablix Movie Page | Java, Tomcat, AWS, GCP, Docker, Kubernetes

- Crafted a responsive front-end using HTML, CSS, and JavaScript with advanced search, filtering, and autocomplete features for movies, optimizing the user experience for seamless navigation.
- Built a robust back-end in Java and Tomcat with a **master-slave MySQL database configuration** and **Redis caching**, optimizing query performance, reducing response time by 40% with edit distance queries, and minimizing user search errors by 18% through efficient RESTful API endpoints and optimized server-side logic.
- Managed the deployment and orchestration of the system using **AWS EC2, ELB (Elastic Load Balancing), Kubernetes, and Docker containers expanding scalability by 3x** and reducing server response time by 30%.

ACTIVITIES

LikeLion | Co-founder of LikeLion UCI

August 2022 – August 2023

- Co-founded** UCI's first coding platform, facilitating **peer learning for 100+ students** with 80% hands-on collaboration.
- Led 10+ workshops that trained participants in **enterprise-level programming and IT practices**, enhancing their ability to contribute to large-scale IT projects in Fortune 500 companies.
- Connected with 50+ students through LikeLion's global network, providing mentorship and collaboration in **IT projects and hackathons**. As a result, 20% of participants secured internships in tech.

SKILLS

Programming Languages: Python, Go, Java, C/C++, HTML/CSS, JavaScript, Bash

Frameworks & Libraries: Flask, FastAPI, React, Node.js

Tools: Git, Unix, MySQL, MongoDB, Docker, Kubernetes, AWS, GCP, Tomcat, Maven, VS Code, IntelliJ, Eclipse

Concepts: Software Engineering, Data Structures & Algorithms, System Design, Database Systems, Cloud Infrastructure, Machine Learning, REST API, Unit Testing, Test-Driven Development

Language Proficiency: Fluent in English and Korean; Conversational Proficiency in Japanese

Certifications: AWS Certified Cloud Practitioner
